Introduction 1/

The Albany-Schenectady-Troy area is 1 of 40 major labor markets in which the Bureau of Labor Statistics is currently conducting occupational wage surveys. Occupations common to a variety of manufacturing and nonmanufacturing industries were studied on a community-wide basis. Cross-industry methods of sampling were thus utilized in compiling earnings data for the following types of occupations: (a) office; (b) professional and technical; (c) maintenance and power plant; (d) custodial, warehousing, and shipping. In presenting earnings information for such jobs (tables A-1 through A-4) separate data have been provided wherever possible for individual broad industry divisions.

Occupations characteristic of particular, important, local industries were studied on an industry basis, within the framework of the community survey. 2/ Earnings data for these jobs have been presented in Series B tables. Union scales (Series C tables) are presented in lieu of (or supplementing) occupational earnings for several industries or trades in which the great majority of the workers are employed under terms of collective-bargaining agreements, and the contract or minimum rates are indicative of prevailing pay practices.

Data were collected and summarized on shift operations and differentials, hours of work, and supplementary benefits such as vacation and sick leave allowances, paid holidays, non-production bomuses, and insurance and pension plans.

The Albany - Schenectady - Troy Metropolitan Area

Total population of the Albany-Schenectady-Troy Metropolitan Area (Albany, Schenectady, and Rensselaer Counties) was almost 525,000 in March 1952. The three chief cities accounted for more than 310,000 of the total. This tri-city area is situated at the junction of the Hudson and Mohawk Rivers. These waterways, together with the Erie Canal, link the Atlantic Ocean and the Great Lakes. Consequently, the Albany area is an

important terminal point, with more than 20,000 employees engaged in land and water transportation. As the capital of New York State, Albany has political importance. Almost 41,000 workers are in government service in the area. Schenectady, where major producers of electrical apparatus and transportation equipment are situated, is a durable-goods manufacturing center. Troy's principal products include men's shirts and other types of wearing apparel.

Total employment in the area (excluding agriculture, government, and construction) was 179,500 in March 1952. Of this number, more than 88,000 were employed in manufacturing, and approximately 91,000 were engaged in nonmanufacturing industries.

Among the industry and establishment-size groups within scope of the Bureau's study, three out of four plant workers
were employed in establishments having written agreements with
labor organizations. In the public utilities group virtually
all plant workers were covered by union agreements, and in manufacturing approximately 90 percent of the factory workers were
employed in organized plants. In service industries and wholesale and retail trade, unionized employees represented 40 percent or less of the total plant employment. Unionization of
office workers was found in establishments employing 20 percent
of the office workers in the area.

Occupational Wage Structure

Wage levels in the Albany-Schenectady-Troy area were affected by a number of general wage increases between January 1950, the base date for the Wage Stabilization Board's "catchup" wage increase formula, and March 1952, the date of the study. Ninety-five percent of the plant workers and 80 percent of the office workers in manufacturing received wage or salary adjustments, usually on a cents-per-hour basis. Most of these increases ranged from 10 to 19 cents. In nonmanufacturing establishments, approximately 55 percent of the plant and 45 percent of the office employees received general increases. In many establishments, however, wages and salaries were adjusted on an individual basis rather than by general wage increases.

More than 80 percent of the area's plant workers were in establishments which had formalized rate structures for time-rated workers. Over 55 percent of the plant workers were employed in establishments with plans providing a single rate for each occupation; 25 percent with a formalized range of rates for each job classification; and the remainder were employed by firms which determine rates on an individual basis. The last method was found to an appreciable extent only in trade and service industries. The rate-range method was predominant only in public utilities.

^{1/} Prepared in the Bureau's regional office in New York, N. Y., by Frank C. Grella and Theodore Allison under the direction of Frederick W. Mueller, Regional Wage and Industrial Relations Analyst. The planning and central direction of the program was carried on in the Bureau's Division of Wages and Industrial Relations.

^{2/} See appendix for discussion of scope and method of survey.

Salaries for almost 50 percent of the office workers were determined on the basis of formal rate ranges. Such plans were particularly prevalent in utilities and financial institutions. Formal plans providing single rates for each job classification affected 20 percent of the clerical workers, virtually all of whom were in manufacturing establishments. Individual determination of salaries, affecting the balance of clerical workers studied, was found primarily in the trade and services industries.

Virtually all of this area's plant workers were employed in firms having established minimum entrance rates for inexperienced plant workers. More than a third of all plant workers were in firms with minimum rates ranging between \$1.15 and \$1.25. Such entrance rates were found primarily in large mamufacturing plants. Among smaller manufacturers (250 workers or less), more than half the factory workers were in firms with minimum entrance rates of less than \$1. Nearly all workers in public utilities were in firms with a minimum rate of 95 cents or more. Lowest minimum rates were found in the service industries and retail trade where 90 percent and 70 percent of the employees, respectively, were in establishments having minimum rates of 75 cents or less.

A fifth of all plant workers in manufacturing establishments were employed on late shifts in March 1952. Virtually all extra-shift workers were paid a differential over day (first-shift) rates, which was a percentage premium for two-thirds of the workers and a cents-per-hour premium for the others. Percentage differentials for third-shift work were 10 percent of base pay, whereas those for second-shift work ranged from 5 to 10 percent. Shift differentials paid in cents-per-hour were most frequently 4 or 7 cents for the second shift and 6 cents for the third.

Supplementary wage benefits granted to office workers were generally more liberal than those granted to plant workers. Nearly all plant and office workers were eligible for a paid vacation. After 1 year of service, 85 percent of the plant workers received a 1-week vacation with pay, whereas 75 percent of the office workers received 2 weeks. Plant workers, after 5 years of service, were generally granted 2 weeks' vacation with pay. Six or more paid holidays a year were received by 9 out of 10 plant workers and by virtually all office workers. One out of 4 office workers, in contrast to only 1 out of 13 plant workers, was employed in an establishment with formal provisions for paid sick leave after 1 year of service without any waiting period.

Slightly more than half the plant workers in the Albany-Schenectady-Troy area were scheduled to work 40 hours a week in March 1952, whereas 40 percent had work schedules of more than 44 hours a week. The predominant workweek for women office workers was 40 hours, though a third had shorter hours, particularly in the public utilities group and in financial institutions, where a $37\frac{1}{2}$ -hour week was common.

Wages and salaries of workers in manufacturing industries were generally higher than those in nonmanufacturing. In 13 of the 18 office jobs permitting comparison, average salaries in manufacturing plants exceeded those in nonmanufacturing establishments. In most of these jobs the differences ranged from \$5 to \$7.50 a week. Average hourly earnings for plant workers studied on a community-wide basis were highest in manufacturing in 15 of the 18 occupations where comparison was possible. Generally, the differences ranged between 10 and 23 cents.

The study covered establishments with more than 20 workers in the nonelectrical machinery industry (Group 35) as defined in the Standard Industrial Classification 'anual (1945 edition) prepared by the Bureau of the Budget; machine-tool accessory establishments with 7 or more workers were also included.

2/ Data limited to men workers.

3/ Excludes premium pay for overtime and night work.

4/ Insufficient data to permit presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

5/ Includes data for operators of other machine tools in addition to those shown separately.

1/ Includes data for industries in addition to those shown separately.
2/ Unduplicated total.
* Transportation (excluding railroads), communication, and other public utilities.
** Finance, insurance, and real estate.

Appendix - Scope and Method of Survey

With the exception of the union scale of rates, information presented in this bulletin was collected by visits of field representatives of the Bureau to representative establishments in the area surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in compiling earnings data for the following types of occupations: (a) office clerical, (b) professional and technical, (c) maintenance and power plant, and (d) custodial, warehousing, and shipping (tables A-1 through A-4). The covered industry groupings are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Information on work schedules and supplementary benefits also was obtained in a representative group of establishments in each of these industry divisions. As indicated in the following table only establishments above a certain size were studied. Smaller establishments were omitted because they furnished insufficient employment in the occupations studied to warrant their inclusion.

Among the industries in which characteristic jobs were studied, minimum size of establishment and extent of the area covered were determined separately for each industry (see following table). Although size limits frequently varied from those established for surveying cross-industry office and plant jobs, data for these jobs were included only for firms meeting the size requirements of the broad industry divisions.

A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments

of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings, including commissions for salespersons, are included. Where weekly hours are reported as for office clerical, they refer to the work schedules (rounded to the nearest half-hour) for which the straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

Information on wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question, except in the section relating to women office workers of the table summarizing scheduled weekly hours. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under tabulation for insurance and pension plans.

ESTABLISHMENTS AND WORKERS IN MAJOR INDUSTRY DIVISIONS AND IN SELECTED INDUSTRIES IN ALBANY-SCHENECTADY-TROY, N. Y., 1/ AND NUMBER STUDIED BY THE BUREAU OF LABOR STATISTICS, MARCH 1952
